

IN THE SPECIFICATION

On page 11, paragraph 2, amend the specification as follows:

As Figure 9 and 10a illustrate, in some cases, e.g., when using a cover material that is not sturdy, it may be desirable to employ a unit ~~40~~40 comprising panel cores ~~41~~41 ~~43~~43 that are pre-glued onto a sheet ~~45~~45 which corresponds to the cover 25 in the previously described embodiments) comprising sturdy but flexible material. Alternatively, as Figures 10b-10g illustrate, a unitary component 40' may be used, wherein a thick, sturdy material such as cardboard or plastic is used, and wherein the panel cores 41'-43' are formed by excising two portions 47', 48' in the unitary component 40', such that only a "sheet" portion remains in those excised locations 47', 48'. (Figure 10c is a closer view of the unitary component 40' of Figure 10b, and Figure 10d is a top perspective view of the same unitary component 40'.) Figure 10e is a side cutaway view of an exemplary hinged cover 40' consistent with the invention, wherein the cover 45' and paper liner 28' are glued in place onto the unitary panel 40'.
